**REPORT ON WORLD FOOD SAFETY DAY**

**2022-2023**

On 7<sup>th</sup> June 2023 at 2:00PM World Food Safety Day was organized in our college. Smt. Kumuda Sharath KAS officer, Joint Director, Food, Civil Supplies and Consumer Affairs Department, Mysuru was the Distinguished speaker.

The co-ordinator Dr. Prakruthi A R welcome the gathering. The Chief guest in her speech she pointed out that importance of food safety and security. There is enough food in the world for everyone. Locally-sourced solutions will ensure that everyone has enough to eat and families can build their communities without worrying about securing one of our basic human rights. Let's build a world without hunger. Malnutrition is associated with over a third of child mortality. Nutrition is an excellent investment—it empowers people and communities. In doing so, nutrition fuels the development process and leads to poverty reduction. Improved nutrition is central to improved income generation,

poverty reduction, and more rapid development. Well-nourished mothers are more likely to give birth to well-nourished children who will attend school earlier, learn more, postpone dropping out, marry and have children later and give birth to fewer and healthier babies, earn more in their jobs, manage risk better, and be less likely to fall prey to diet-related chronic diseases in midlife. The consequences of malnutrition for well-being and for socio-economic development are far-reaching. In infants and young children, under nutrition and growth retardation are associated with reduced physical activity, impaired resistance to infection, impairment of mental development and reduced educational capacity, and increased morbidity and mortality.

Dr. Deepu Principal in her presidential address she highlighted that, Food safety and food security are interrelated concepts with a profound impact on quality of human life, and there are many external factors that affect both of these areas. Food safety is an umbrella term that encompasses many facets of handling, preparation and storage of food to prevent illness and injury. Included under the umbrella are chemical, microphysical and microbiological aspects of food safety. A priority of food chemical quality is control of allergens which can be life threatening to some people that are highly sensitive. Other chemical properties of food such as vitamin and mineral content are also important and affect the overall quality of the food but are not as significant in terms of food safety. To prevent injury, the absence of foreign microphysical particles is crucial. Microphysical particles such as glass and metal can be hazardous and cause serious injury to consumers. Pathogenic bacteria, viruses and toxins produced by microorganisms are all possible contaminants of food and impact food safety.

Finally the programme ended with vote of thanks by Manans V 3yrs LL.B final year students and witness by the Teaching, Non-Teaching Staff's and Students.
